

DEV ENTERPRISE

Fire Safety | Industrial safety

INTRODUCTION

Protecting Against the Fire have always been the part of Dev Enterprise. Dev Enterprise is a safety based company in Surat, Gujarat which aims at protecting the lives and prevention of fire. We Introduce ourself in the field of:

- Fire Protection
- Fire Prevention
- Fire Fighting & Safety Systems

We do supplying, installing, testing and commissioning of Fire Fighting System that includes :

- Fire Extinguishers all ranges
- Fire Hydrant system
- Fire Sprinkler System
- Fire alarm System
- Smoke detection system
- Personal Protective equipment's
- Fire Audit
- Fire Hydrant system accessories
- AMC (Annual maintenance Contract)
- ARC (Annual Rate Contract)

DEV ENTERPRISE

Why us?

- Experienced Team for Installation
- Sales Service after installation
- Qualitative Range of Products
- Economical Price Range
- Prompt Delivery
- Positive Records
- Customized Solutions

To add better quality and excellence in our services, we have an experienced team. Providing all the safety products under one roof such as Fire Safety, PPE's, Road Safety and Work on height Safety.

Quality Control

We are renowned in the industry as a quality centric organization, which follows each & every rule defined by the industry. In order to maintain strict quality standards, we have developed a stringent quality procedure that is rigorously followed at each step of entire process

FIRE HYDRANT INSTALLATION

It is one of the oldest but the most effective and common fire fighting solution in residential, commercial, industry, a well-designed and well placed out hydrant system forms the backbone of entire fire protection system. It includes heavy duty overhead and underground pipe lines with accessories.

External hydrant valves are provided at every strategic locations of the building for effective use at the time of fire case. Fire hydrant is a pipe that allows water to flow from a water main with the control of a valve in order to put out a fire. It help to control fire outage at every stage with most corrective and effective solution.

Fire hydrant is designed to provide quick access to water in the event that a fire breaks out. Fire brigade connections are installed as a standalone systems which act like building specific fire hydrants providing fire protection which will be readily available to fire fighters.

Guidelines and approval for hydrant system is available from various national and international like: NBC and local fire authorities.

System Components: Fire fighting pumps and accessories, Piping, Fire panels, Landing valves, Hoses, Coupling, Hose reel, Branch pipes and Nozzles, Fire bridge connections, Wiring and instrumentation, Maintenance valves.

FIRE ALARM INSTALLATION

Fire alarm system is the first one to react in any emergency fire situation. It is a crucial equipment to alert people in case of fire. Thus, having such an equipment in your building will guarantee safety of people at all times.

At Dev Enterprise, we can help you design and install a fire alarm system according to your needs. We also offer inspecting, testing, repair and maintenance services on addressable and conventional fire alarm systems.

If you have a fire alarm system installed in your building, you still need regular testing and inspection of the alarm system to ensure that it is ready to operate and alert people about an emergency. We can inspect, repair, and service every component of your fire alarm system.

Some of the significant benefits of using Fire Alarm Systems are,

- Fire Alarm Systems are mandatory in Hospitals, Schools, Retail & Many Other industries
- Detect Fire Early before the actual fire accident
- Avoid loss of life, valuable due to fire as Fire Alarm detects fire and can also automatically trigger Fire Control Devices
- Systems can have few detectors to hundreds of indicators with multiple zones as per the size of the premise.
- Integrations with Fire Fighting Devices for Automatic Fire Control.

FIRE AMC SERVICES

WHY INSPECT YOUR FIRE EXTINGUISHERS TODAY?

Don't think that once you have purchased and installed the correct fire extinguishers for your business, you never have to think about those shiny red canisters ever again. It is very necessary to have your extinguishers professionally maintained annually, in addition to performing monthly inspections yourself.

SERVING OF ALL FIRE AND SAFETY EQUIPMENTS

Your fire protection equipment, including your fire sprinkler system, fire extinguishers, fire alarms, and fire suppression systems, is critical to keeping your building safe from fires at all times. However, your fire protection equipment is only effective if it's frequently inspected and maintained by the professional.

In many cases, having non-working fire protection equipment can be even more dangerous than not having any at all!
